Onnittelut!

Sairaanhoitaja-koulutusta 120 vuotta Oulussa

Congratulations!

Nursing Education 120 years in Oulu

Pirjo Kejonen
Chief nursing officer, PHD, Msc
Oulu University Hospital
Health services in Finland now... but health and social services will be integrated 2019-2020?

**NOW**

**PRIMARY HEALTH CARE**

Public health, maternity and child welfare, school & student health care, medical rehabilitation, dental care

**Municipal health centres**

Can be run by a municipality or by several municipalities

**SPECIALISED HEALTH CARE**

- Hospitals

**Hospital districts**

Each municipality belongs to a particular hospital district

- Financed primarily by tax revenue
FUTURE CHALLENGES

- Sparse population, distance to services
- Aging population
- Increased and increasing need of medical services
- Rising service costs
- Limited finances / diminished even more?
- Development of treatment technologies and pharmaceutical drugs / costs
- Availability of work force (and competition for work force)
- Aging infrastructure (services, hospitals)
- Effects of the new Health Care Act, availability of care within statutory time frames
- Effects of the patient’s right to choose (even at EU-level)
- Medicalization
Elements of Future Hospitals

- Core/hot hospital
- Emphasis on outpatient services
- Standardization
- Day care unit
- Day surgery
- Patient hotel
- Advanced logistics
- Efficient ICT
- Technology, automation
DEVELOPMENT OF OUT-PATIENT CARE VISITS AND WARD DAYS IN 2000-, SPECIALIZED HEALTH CARE

OUT-PATIENT VISITS

WARD DAYS

335 183
341 589
431 064

272 644

+ 28,6 %
-20,2 %
FROM PATIENTS POINT OF VIEW, 2030:

- Patient participates in his/her own care in the hospital and at home
- Functional information systems (incl. invites, booking etc.), other e-services
- Dispatch of information and availability improved
- Clear guiding system
- Day hospital and patient hotel
- Infections under control (minimum)
- Care satisfaction high
- Right to choose actualized also in practice
- Patients satisfied with facilities and feel like being in the right place
- **Patient want to receive the best possible care!**
Nursing practises/ care work change

- Whole care chain has to be seen (from home to home)
- In future in-patient care is even more demanding than today
- More out-patient care
  - needs new models in care/ nursing
  - patient counselling is in very important role
  - new technologies and e-services
- Virtual hospital services
- But the ”basis” in nursing will be the same
Nurse education

- What are the future demands in nursing and nurse education?
- How new challenges/possibilities in health and social services are noticed in education?
- The structure of education (also in change)
- "Magnet" of nursing work and nurse education?
New models for clinical training

- Training modules; for example, multiprofessional clinical training
- Simulation
- Video-based training
- etc.

- Clinical training needs to be more focused to out-patient care (and also home!)
Future means development together
