

## Environmental Policy of Oulu University of Applied Sciences, School of Health and Social Care

The School of Health and Social Care in Oulu University of Applied Sciences is a diversified education, research and development centre. Experts are educated in Oulu and Oulainen to work in regional, national and international tasks and projects for health and well-being. The School trains research and development work in co-operation with working life, other universities and research centres.

The School of Health and Social Care develops its activities according to the operation programme of sustainable development in Oulu University Applied Sciences and complies with environmental legislation, rules of the authorities and the instructions of the City of Oulu or the Town of Oulainen and its own administrator. Some of the central environmental aims are reducing electricity and paper consumption, reducing the amount of waste and strengthening the environmental knowledge in teaching.

The School of Health and Social Care ensures that all staff members, students and everyone involved in its activities have a clear picture of the environmental impacts of their actions and that they are committed to controlling and improving environmental issues. The School informs its students and staff about environmental issues and their development.

The environmental issues at the School of Health and Social Care are written in the curricula and it carries out the principles of sustainable development in its teaching, research and development work and in its own activities.

Oulu, the 26 th of March 2013

Kari Virolainen

Director of School
